

Clearflow Treated Floc Curtains

Treated Jute Floc Curtains

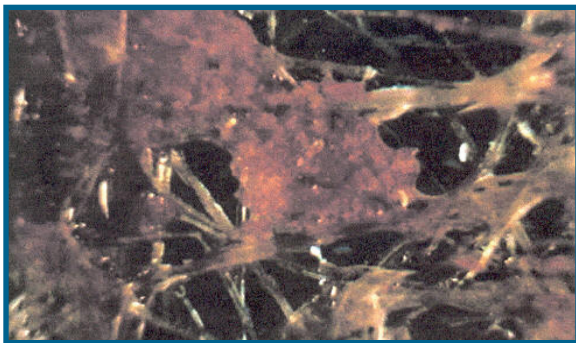

- Easy to install
- Allows for high flow
- Passive polishing mechanism for fine sediment
- Lasts up to 2 seasons (yearly retreatment with soil lynx may be required)

Clearflows treated floc curtains and dispersion fields are typically installed downstream of Clearflow's Water Lynx Blocks as a final polishing mechanism for fine sediment. The Floc Curtains have a large open weave to minimize hydraulicing issues. Unlike standard sediment curtains, which do not allow for flow and use retention time as key factor in sedimentation, Clearflow's Floc Curtains want the flow so that the fine sediment can be captured and removed from the water column thus greatly reducing TSS (Total Suspended Solids).

Great for use in:

- Ponds
- Creeks and rivers
- Canals
- Flow channels
