VAPORFLEX® PREMIUM – UNDERSLAB VAPOR/GAS BARRIER

VaporFlex® Premium (VP) 20 mil is a seven-layer coextruded vapor/gas barrier made using high-quality virgin-grade polyethylene and EVOH resins to provide unmatched impact strength and superior resistance to gas and moisture transmission. VP is more than 100 times less permeable than typical high-performance polyethylene vapor retarders against Methane, Radon, and other harmful VOCs. They are tested and verified for unsurpassed protection against BTEX, HS, TCE, PCE, Methane, Radon, other toxic chemicals, and odors.

VaporFlex® Premium is a multi-layer gas barrier manufactured with the latest EVOH barrier technology to mitigate hazardous vapor intrusion from damaging indoor air quality and the safety and health of building occupants. Underslab vapor/gas barrier is one of the most effective underslab gas barriers in the building industry today, far exceeding ASTM E-1745 (Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill Under Concrete Slabs) Class A, B, and C requirements. Available in a 20 (Class A) mil thicknesses designed to meet the most stringent requirements. VP is produced within the strict guidelines of ISO 9001 Certified Management System.
