

RCR® - REINFORCED CONCRETE ROLL

REVOLUTIONIZE HARD ARMOR EROSION CONTROL

RCR® offers an innovative solution for quick, cost-effective, and versatile erosion control and structural reinforcement. This advanced concrete composite, encapsulated between two layers of non-woven geotextile, is designed to deliver superior protection in a fraction of the installation time required by conventional concrete solutions.

RCR® is ideal for applications like erosion control, irrigation canals, and containment ponds, or for temporary roads and drive-over swales. Its flexible, roll-out design allows for rapid installation without the need for concrete trucks, mixing, or rebar, making it perfect for remote sites or projects with time constraints.

DURABLE AND VERSATILE

A durable and versatile solution with long-term performance for erosion control. The RCR® can be used in various conditions including both dry and wet.

QUICK TO INSTALL

The RCR® is easy to install. No concrete trucks, rebar, or heavy equipment are required. Simply unroll and hydrate to achieve a robust, durable surface.

REDUCE CARBON FOOTPRINT

An eco-friendly, cost-effective alternative to traditional concrete, shotcrete, and riprap, reducing the carbon footprint and environmental impact of hard armor erosion control projects.
