

EL 1000 GEOMEMBRANES

RELIABLE CONTAINMENT PERFORMANCE FOR YOUR HYDRAULIC FRACTURING OPERATIONS

EL 1000 has been the trusted geomembrane used in hydraulic fracturing operations for many years. Its unique features, such as the immediately recognizable grey skin and high level of flexibility, have made this the go-to product in the industry. We designed and continue to manufacture this geomembrane to bring a balance of value and reliability that has made it a staple in our industry.

EL 1000 provides strong chemical and UV resistance, along with the durability needed for harsh conditions. Its smooth-skin format, available in 20 to 40 mil thicknesses, offers flexibility for uneven surfaces while maintaining secure containment of drilling fluids and water. The light gray color supports quick inspections, and its versatility makes it suitable for a wide range of containment applications.

COST-EFFECTIVE PERFORMANCE

With a 10 year pro-rated weathering warranty available, EL1000 provides good value with mid-range UV stability.

EASE OF INSTALLATION

It can be prefabricated into large panels for delivery, streamlining on-site installation and making it an ideal solution for drop-in tank liner applications.

FLEXIBLE MEMBRANE

Excellent multi-axial flexibility allows the liner to conform to uneven surfaces and differential settlement without cracking or tearing.
